

# GRAFFITI SHIELD<sup>INC.</sup>

## ULTIMATE ANTI-GRAFFITI AND SURFACE PROTECTION SOLUTIONS

**GLASS SHIELD** is a 4 or 6 mil thick anti-graffiti abatement film designed to be a clear undetectable sacrificial coating on glass. This film is thick enough to protect the glass substrate from mild to extensive damage. Once damaged by vandals in the form of scratching or carving, it can simply be removed and replaced in moments giving your glass a “new like” appearance. If vandalism is done in the form of paint or acid, thanks to our hard coating, it will appear in the form of harmless droplets which can easily be wiped off with soap and water. For your convenience, Glass Shield comes in multiple versions, optically clear, anti-glare or infrared rejecting. And now, with printing services added by Graffiti Shield, you have an ability to turn your windows into a canvas for advertising.

**METAL SHIELD** is a thick anti-graffiti abatement and obscuring film to be applied on existing metal surfaces to replicate the original surface appearance. It is available in Stainless Steel (6 mil) and Brushed Aluminum (6.5 mil) finishes. This film is thick enough to protect the substrate from normal damage if it was to be vandalized again and or cover up existing damage while making the surface look new and factory finished. Our adhesive is designed to bond just strong enough as to not be removed by the general public, but to be easily removed by a trained technician without leaving any adhesive transfer on the metal surface. With safety messages and all indicators printed right on the material the final look is neat and clean.

**MIRROR SHIELD** is a 5 mil thick opaque mirror film that covers an existing graffiti and corrosion on your mirrors. When a mirror is re-vandalized it will only be the protective film that's destroyed. Therefore, Mirror Shield is a green alternative to replacing the actual mirror, but the real magic starts when you add printing on the mirrored surface. Advertisers are spending millions to gain just a few seconds of attention on a TV, but in this case you already have a couple of minutes of attention while customers occupy the bathroom. Like all our other products, Mirror Shield is acid resistant with an advanced adhesive system so that it couldn't be pulled off by the general public, but by a trained technician or staff without leaving any adhesive residue behind.

**CUSTOM SHIELD** is the patent pending product line designed for a specific substrate and will mimic an original surface look while giving it all the benefits of an anti-graffiti film. The materials can be used in many different areas and applied to many different substrates. Custom Shield is made in small and large batches to fit your unique needs. Custom Shield can be customized according your needs.. The films can be sold by the roll or precut on our CNC machines. Either way, we've got you covered.

**PRECUT SYSTEM** ensures that you will get a fast, reliable and efficient service that won't cost you the same as whole replacement. All precut pieces are carefully measured, designed in CAD, catalogued in our database and cut on our custom CNC machines with .001 tolerance to fit any panels perfectly every time you need it. We also have the option to engrave part numbers for easy reference to patterns. Our unique system and nationwide dealers network allows us to cooperate with any size companies without necessity to order hundreds of pieces at a time.
