BIRDBUFFER®
Invisible Protection...Visible Results®

Keep Pest Birds Away

"Since using the BirdBuffer, there hasn't been a bird within a mile of this place"

PG&E Utility Company

WHY CHOOSE BIRDBUFFER?

BirdBuffer is the industry standard in pest bird control. The patented BirdBuffer is the original vapor technology, producing the smallest and driest particle size on the commercial market. BirdBuffer's 60 MPH blower automatically thrusts vapor farther and wider than any other form of bird control, only requiring 10 minutes of service per month.

BirdBuffer is the most humane solution in the industry, more cost effective than spikes and netting, and completely safe. BirdBuffer will gently, yet aggressively, train pest birds to find another location (often miles away), protecting your staff and business assets.

The BirdBuffer team will evaluate your pest bird challenge, recommend a plan, discuss affordable payment options, and provide ongoing, free technical support. The industrial leaders choose

NO MORE BIRDS.

The patented, original, and most effective form of vapor bird control on the market today. Created by award-winning designer, Gary Crawford
