FireWorks

Incident Management Platform

In 1881 when Robert Edwards patented the electric alarm bell he started a tradition of innovation that would lead the path to safety for generations to come. Today – whether the incident is a result of a fire, weather emergency, environmental accident, or workplace violence – response personnel need to remain in control of the situation and keep the lines of communication open. The EDWARDS incident management solution includes Networked FireWorks – an integrated platform that uses your facility's robust life safety backbone to offer responders the tools they need, not only to warn building occupants of imminent danger, but also guide them to safety.

Take it from the people who invented life safety.

Prepare your facility for the unexpected

FireWorks Incident Management

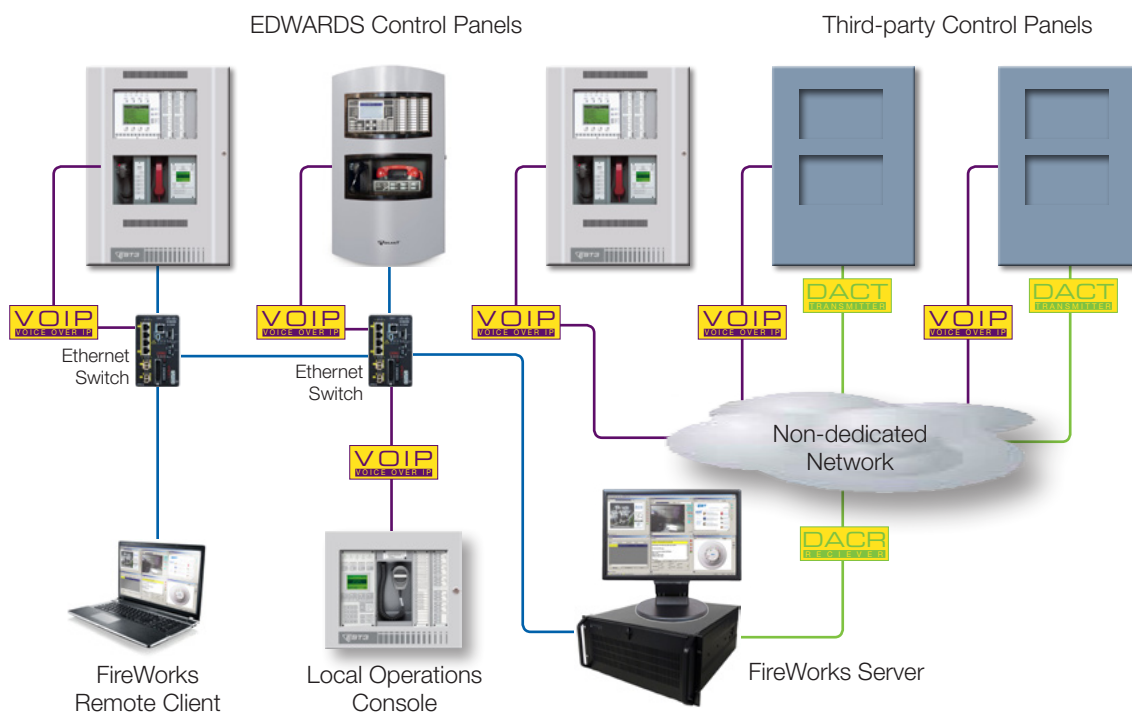

High Powered Speaker Arrays

HyperSpike High Power Speaker Arrays: lightweight and rugged outdoor-rated appliances that rank among the industry's smallest in physical size – yet reproduce some of the clearest and loudest audio signals available. Also suitable for indoor industrial applications. Handheld units available for campus responders.

FireWorks Incident Management Platform

Powerful Networked Command and Control Interface that provides survivable, fail-safe system response and communication. Regardless of the nature of the facility incident, your critical assets are protected by one of the most sophisticated response solutions available today.

Example UL Listed Application

Enterprise Level Management and Control: EDWARDS provides the system and point capacities along with network solutions from Cisco to provide enterprise-level communications and IP point control and monitoring worldwide to protect and manage critical cloud-based facilities.

SUPPRESS

For over a century Badger Fire Protection has been the choice of professionals. From the earliest hand helds to the powerful BadgerExtra Class K wet chemical extinguisher, experts turn to Badger Fire Protection for quality solutions.

Variety of Models to Fit Most Applications

- Standard
- High flow
- Advantage
- Specialty Units

Safety First.

Quality First.

Badger First.
