We Connect People at Moments That Matter...

Technology exists to serve. The better it serves us, the better it makes us.

At Procom, we leverage technology to connect people at moments that matter – whether the moment involves stopping a “bad guy” in his tracks, getting emergency medical care to a student on a school bus, or helping a football fan get her order of nachos and beer at a packed stadium.

By connecting people at crucial moments we help build a safer, more productive world.

Thanks to our solutions businesses become more productive, customers get better service, cities operate more efficiently and small emergencies never become big disasters. Most important of all, lives are saved.

It's what we do every day. But how we do it is what sets us apart.

We immerse ourselves into the daily lives of our customers to understand their needs and challenges. We then introduce them to new ways of doing things, matching our rich set of solutions to their unique circumstances. And we back our technology with some of the best customer service in the business.

Customer service – it's imbedded into our culture.

It includes such qualities as integrity, dedication, courteousness, speed, and quality workmanship. Other organizations use those words to describe who they are, but then they ignore them for the sake of expediency. Not so at Procom, where customer service is always our priority.

In a few words, our solutions turn communication into information, and information into intelligence – all of which leads to better decisions, better responses, and better outcomes.

So while we may not be risking our lives chasing down that terrorist, or putting everything on the line to grow the business, or giving our all to keep that school district running, make no mistake about it – that is our mission in life.

Mission Critical P25 Digital 2-Way Radio Subscribers

From the smallest P25 portable radios to the most powerful and feature rich models, our extensive portfolio of robust and reliable subscribers provide secure voice and data capabilities along with on-demand interoperability – for seamless communications between agencies and jurisdictions. (Conventional, trunked, waterproof, ruggedized, portable and mobile models available.)

Encrypted Covert Body Comm Kits

Our AES encrypted Body Comm kits contain the essentials your undercover teams need for rapid deployments: 6 small handheld radios, 12 Li-Ion batteries, a keyloader, 6 single unit chargers, 6 micro-digital wireless receivers, 6 neck loops with key fob PTTs, a variety of equipment-carrying vests and harnesses – all in a rugged custom travel case.

2-Way Radio Subscribers Business/Industrial Digital

Our affordable B&I digital radio solutions provide clearer voice communications over a wider area - plus integrated data capabilities, revolutionizing how business works. Private one-to-one calling, GPS tracking of assets, and work order generation via radio are all possible, along with time-stamped recording of calls. Seamless integration of smartphones and tablets with your radio system is another available solution.

2-Way Radio Subscribers Business/Industrial Analog

From basic handheld radios with only four channels to in-vehicle mobile radios with hundreds of channels and advanced capabilities, we have the analog solution that's right for you. We also offer solutions that allow you to migrate from analog to digital over time, in pace with your budget.

Single Site/Multi-Site P25 Trunked & Conventional Systems

With lives on the line, you need a mission-critical radio network that's available 24x7, one that provides integrated voice and data, interoperability between agencies, and robust information assurance. We offer a variety of solutions, from a local single site core to a linked multi-site system for wide area coverage, backed by our award-winning service and support.

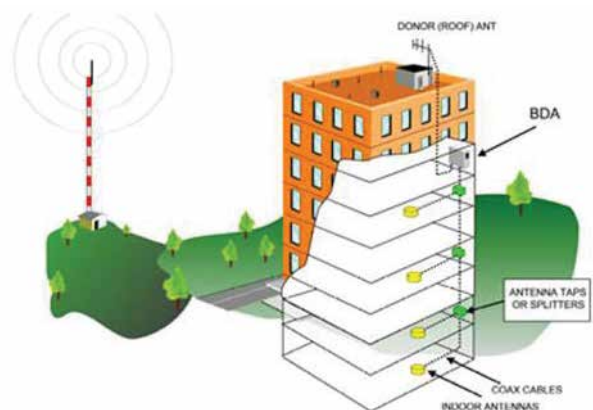

Encrypted Smartphone to 2-Way Radio Interoperability

Our battle-tested unified PTT solution provides secure and seamless communications – such as voice, text messaging and GPS location services – between disparate LMR systems, PCs and smart devices. Our solution saves money by providing LMR connectivity to individuals who can't justify an expensive two-way radio purchase and it vastly extends your LMR network, allowing your people to stay connected virtually anytime, anywhere.

Local/Wide Area Commercial Digital Radio Systems

Our digital B&I radio systems integrate data with crisp, clear voice communications to enhance safety, customer service, and productivity. Make private or group calls, track the location of vehicles, issue work orders, tie-in smart phones and tablets, and record transmissions seamlessly. And because you control the system it won't get overloaded, as cell phones do, should a serious incident occur.

In Building Public Safety Radio & Cellular Coverage (DAS)

When first responders enter a building lives are on the line. Robust two-way radio communications are a critical part of their lifeline. Add to that the high expectations of wireless end users (cellular, LTE, or otherwise) and in-building coverage becomes even more critical. We have solutions that can amplify and distribute carrier signal throughout your building, including stairwells, elevators, parking structures, and basements.

Rapid Deployment Fly-Away Kits (Mid and High Power)

The perfect solution for covert teams that must quickly install mobile communications in vehicles temporarily. Our Fly Away kits provide up to 100W of output power and come standard with a fully functional remote control head, quick connect battery cables, cigarette lighter plug, and rugged case with pouch. A complete suite of covert and other mobile antennas is available to make the mission a complete success.

Grab-N-Go Transportable Repeater & Interoperability Systems

Our portfolio of Grab-N-Go systems are an excellent solution when radio coverage and interoperability are needed in remote places - like tunnels and subway stations - even during a power outage. Our system includes a 30W transportable repeater with an option to connect up to four disparate LMR systems. And our long-life batteries will keep life-saving communications going for days.

Transportable Single/Dual Band Repeater Systems

Our transportable repeaters boost RF coverage from HF to 800MHz. We offer small, lightweight, battery powered 6W models for tactical operations all the way up to 30W models that include an optional second band RF link - for expanding your coverage radius by creating a "hive" of fully encrypted linked repeaters.

In Building/On Campus Instant Alert Systems

The WAVE Plus is the ultimate rapid response emergency alert system. As soon as an emergency arises, the WAVE Plus transmits a location-specific message over the 2-way radios carried by first responders. The system can also send emails and text messages. The WAVE Plus is wireless, which makes it easy to set up and expand as your needs change.

Asset Tracking Systems (GPS)

It's not about "big brother" watching – it's about physical safety, cost control, and legal protection for your organization and employees. We have a number of offerings in this category, from subscription-based cellular solutions that update positions every 10 seconds to subscription-free radio-based solutions that update positions every 30-60 seconds.

Dispatch Consoles Command & Control

The integration of voice, data, and video makes today's digital two-way radio systems far more than a platform for voice communications. These added capabilities require advanced Command & Control functionality. We carry a variety of solutions, for fleets as small as a dozen vehicles all the way up to fleets numbering into the thousands of vehicles.

Covert/Standard Accessories for 2-Way Portable Radios

Our covert accessories perfectly complement most major brands of 2-way radios, including various small-form-factor, "body worn," P25 encrypted models. Clear, crisp, wireless DSP-filtered audio combined with an assortment of carrying options enable your agents to blend into the crowd discreetly while maintaining solid communications.

Search & Rescue/Firefighter Accessories

The opposite of our covert accessories, this segment of our solutions portfolio features large PTT buttons, external amplifiers, throat mics, and powerful headsets that are perfect for HAZMAT crews, firefighters, S.W.A.T. teams, and search and recovery (USAR) personnel.

Antennas, Cable, Connectors & Other Infrastructure Products

We carry the best brands in the business: dbSpectra, Sinclair, Tri-Vec Avant (SATCOM), Times Microwave, CommScope, RFS, Belden, ComTelco, RF Industries, and more... Our technicians can terminate cables for you or we can supply the components in bulk. Our help desk is pleased to assist with antenna and grounding questions.

Towers & Shelters

Our solutions in this category are varied and include: new and used communications shelters, masts, fixed and mobile towers, and self-erecting towers that rise at the push of a button. Applications include telecommunications, 2-way radio, video surveillance, and lighting.

Licensing
Coordination

Installation
Maintenance & Repair

Services, Installation, Maintenance, Repairs, Rentals, Leasing & Licensing

Our skilled technicians possess over 200 years of combined industry experience and meet the highest quality standards in the industry. Our licensing staff works hard to obtain the best available frequencies for your use. And our leasing services will enable you to get the system you need today while allowing you to spread payments over time in line with your budget.

Batteries & Chargers for 2-Way Radios

Genuine and fresh Motorola, Vertex-Standard, Kenwood and other OEM batteries and chargers are just a phone call or email away. If you prefer a less expensive, premium-quality alternative, our proprietary brand of batteries and chargers, in use by some of the most demanding customers, will provide the performance you need.
