

DISTRIBUTED IMPACT™

THE ENERGY SOLUTION FOR THE FUTURE, AVAILABLE FROM WGL ENERGY TODAY.

Distributed Impact™ is our total energy solution that integrates diverse energy resources into one strategy designed to support your profitability and sustainability goals.

We'll work closely with you to develop a plan that meets your unique objectives, drawing from our full spectrum of energy solutions, which include:

Traditional Energy from electricity and natural gas

Renewable Energy sources such as wind power, solar and carbon reduction including carbon offsets

Energy Technologies including onsite generation via solar installations, fuel cells or combined heat and power technologies, storage and energy efficiency solutions

Distributed Impact™ can help your business, agency or organization:

- Navigate fluctuating energy markets
- Stay connected in times of crisis
- Efficiently allocate your energy dollars
- Increase sustainability
- Reduce greenhouse gas emissions

WGL Energy is a leader in efficient and environmentally friendly energy solutions including natural gas, electricity, green power, carbon reduction, distributed generation and energy efficiency provided by WGL Energy Services, Inc. and WGL Energy Systems, Inc.

We are committed to helping customers across the U.S. make smart energy decisions that help them save money, manage their energy spend and protect the environment by making energy surprisingly easy.

To learn how **WGL Energy's** integrated products and solutions can help you, go to WGLEnergy.com, email RFP@WGLEnergy.com or call **1-844-4 ASKWGL (844-427-5945)**.

Paper Manufactured and Printed Using
100% Certified Renewable Electricity

*Note: The Carbon Reduction Fund is not a program of Green-e® Climate. Green-e® Climate certifies Carbon Offsets from WGL Energy for large commercial customers only.

FUTURE READY TODAY.

**INTEGRATED PRODUCTS AND SOLUTIONS
THAT INCREASE EFFICIENCIES, LOWER COSTS
AND MAKE ENERGY SURPRISINGLY EASY.**

 **ELECTRICITY**

With WGL Energy, you'll have a variety of electricity plans that help you control energy costs, reduce electricity consumption and support sustainability goals. We'll help you navigate complex energy markets, secure affordable pricing and make smart energy decisions for your business, agency or organization.

Empowered with our market expertise, data-driven tools and future-ready technologies, you'll transform energy from a cost into a strategic asset.

 **NATURAL GAS**

You can control your natural gas costs, reduce consumption and support sustainability objectives with WGL Energy. We offer diverse natural gas plans and convenient procurement vehicles for your business, agency or organization. Our energy experts navigate complex energy markets, alerting you when prices are favorable so you can make smart energy decisions.

 **WINDPOWER**

Green-e® Energy certified WindPower products from WGL Energy offer an affordable way to achieve your sustainability objectives. Unlike conventional electricity sources, wind power is emissions free and produces no harmful waste. You'll support cleaner air while sending a powerful message to your customers, employees and stakeholders.

 **SOLAR RECS**

Solar Renewable Energy Credits (sRECs) from WGL Energy offer you a way to diversify your energy supply mix. In turn, you'll support the growth of clean, renewable solar as an energy source, while reducing your carbon footprint.

 **CARBON OFFSETS**

Carbon Offsets from WGL Energy are an innovative way to counterbalance the environmental impact of your business activities and make sustainability a credible part of your brand. You can match these offsets to any portion of your WGL Energy Services natural gas supply or to offset other activities, such as business travel or corporate events. Our Green-e® Climate certified Carbon Offsets are derived from verified carbon-reduction projects and a portion of the proceeds support the Carbon Reduction Fund, managed by the Chesapeake Bay Foundation.*

 **CUSTOM SOLAR ENERGY SOLUTIONS**

As one of the most experienced commercial solar power developers in the nation, WGL Energy has helped to make clean, sustainable solar energy a viable option for a broader range of sectors. Options for supporting new onsite or offsite solar developments are available, requiring no up-front capital costs, which removes risk for your business or organization.

 **COMBINED HEAT AND POWER**

Combined heat and power (CHP) is flexible and scalable technology that generates both heat and power and sometimes cooling in one single, highly efficient process near the point of consumption. WGL Energy will work with you to develop comprehensive, large-scale CHP and cogeneration projects including management of design, construction, integration and infrastructure improvements without disrupting your existing operations or exceeding budgets.

 **FUEL CELL TECHNOLOGY**

Fuel cell technologies generate power by converting fuel into electricity near the point of consumption. You'll have greater energy security, energy efficiency and independence from the traditional grid.

Making energy work for you requires integrated energy-efficiency measures that are in sync with your overall goals. WGL Energy's expertise and capabilities with both supply-side and demand-side management reduce costs, increase efficiencies and ensure greater energy security and resiliency.

 **ENERGY EFFICIENCY**

Our array of energy-efficiency solutions for government, commercial and industrial customers includes turnkey performance contracting and financing, and performance guarantees. And our free online energy-management platform empowers you to identify energy-efficiency measures that save you money.
