

Office Hoteling Reservation System

Powered by RMG Networks

Enhance Your Office Hoteling Solutions with Intelligent Visual Solutions

For many large companies, office hoteling solutions provide employees an efficient way to work when visiting a headquarters office. Customers with RMG Networks SES (Symon Enterprise Server) create interactive touchscreen applications to enhance and enable office hoteling scheduling systems and increase employee productivity.

CHALLENGE

Provide an easy way for employees to find, reserve and schedule available work-spaces and conference rooms in a corporate hoteling environment.

SOLUTION

Leverage the existing RMG SES installation and integrate it with Microsoft® Exchange, to provide a sleek, interactive touchscreen kiosk solution.

RESULTS

Increased employee productivity, as visiting employees were able to check room availability, reserve rooms and check into them for work more quickly than the old solution.

"By leveraging the capabilities of RMG software, we were able to deploy an easy-to-use interactive platform that improved our employees' productivity."

Conveniently located kiosks running RMG Networks Hoteling Reservation System allow employees to quickly and easily view and schedule rooms for work and meetings.

OFFICE HOTELING CHALLENGES

For many field or remote employees of large companies, office hoteling solutions provide an efficient way to work when visiting a headquarters office. Between meetings, visiting employees find personal work spaces in specially designated "hotel" areas. Scheduling and reserving cubicles or rooms can be a daunting task, especially for large companies that may have dozens, if not hundreds, of hoteling spaces which can include offices, conference rooms and cubicles. Locating available rooms and reserving them is often a manual task that wastes time and energy. Equally challenging for headquarters' staff is physically locating the hoteling employees while they are onsite for meetings.

THE RMG SES SOLUTION

Powered by the SES (Symon Enterprise Server) platform and integrated with Microsoft® Exchange room schedule information, the RMG Networks Office Hoteling Reservation System provides an easy to use application for deploying on touchscreen kiosk displays in corporate hoteling areas.

The interactive solution provides employees with a bird's eye view of workspace immediately available and allows them to easily and quickly make a selection and reserve their area.

Office Hoteling Reservation System
