

# The Simplest Way to Access Real Time Data from Any Sensor, Meter or Device

## About Senseware

Senseware wirelessly monitors performance across all Mechanical, Electrical, Environmental and Plumbing systems to help building managers and energy consultants run their facilities more cost-effectively. Our solution makes it easy to get connected in a matter of minutes and to get instant access to actionable data on the web.

## How it Works

## Features

- All data from one system. Works with all types of sensors, meters, or equipment
- No onsite configuration required
- Wireless. No cabling needed. Lowers deployment cost by as much as 90%
- Up to 10x faster to deploy than other solutions
- Scalable to any size site
- End to end data encryption
- Real-Time Data
- Seamless integration with existing infrastructure & management systems

## Popular Applications

- Energy and Utility Management
- Critical Facility Monitoring
- Auditing and M&V
- Facility Maintenance and Optimization
- Space Planning and Optimization

## Popular Sensors

- Light Exposure
- Temperature & Humidity
- CO2
- Acoustic Level
- Pulse (Power, Water, Gas)
- Modbus & BACnet
- 4-20 mA & 0-5V
- Thermistor
